SDC HACKATHON 2026 · DOMAIN 2 · ORBYTE SMART SME CHALLENGE

Tepat Bill

Check every delivery. Check every bill.

Catches wrong orders and wrong invoices before a small shop pays for them.

THE PROBLEM

Shops pay for orders they never got right

Problem 1

Wrong orders go unrecorded

Grocery shops and other small vendors often get the wrong product or the wrong quantity. There is no formal note of it, so nothing prompts the supplier to correct the order.

Problem 2

Invoices are checked by hand

The owner compares the supplier's final invoice with their own records. Those records can already be wrong, because the earlier errors were never written down.

From our shop-owner interviews: invoices must be checked against received stock every time. Missing items are deducted from the bon, yet the supplier's statement can still bill them.

MALAYSIAN SMES TODAY · SURVEY OF 415 SMES

Shops are already squeezed on every side

67% mention	**Rising costs**	Every ringgit overbilled adds to a cost shops are already struggling with.
43% mention	**Manpower availability**	Checking and chasing by hand takes staff time shops do not have.
42% mention	**Managing cash flow**	Money paid for wrong orders is cash stuck with the supplier.

Out of 415 SMEs mentioning key pressure points. Supplier overbilling makes all three worse.

WHY IT MATTERS

> **Every ringgit a supplier overbills comes straight off the owner's profit. SMEs are the most vulnerable, because these errors repeat order after order.**

EVERY RM1 OVERBILLED

RM3.24

of goods must be sold to earn it back. DOSM puts retail gross margin at **30.9%**.

A "SMALL" 0.5% ERROR

RM1,620

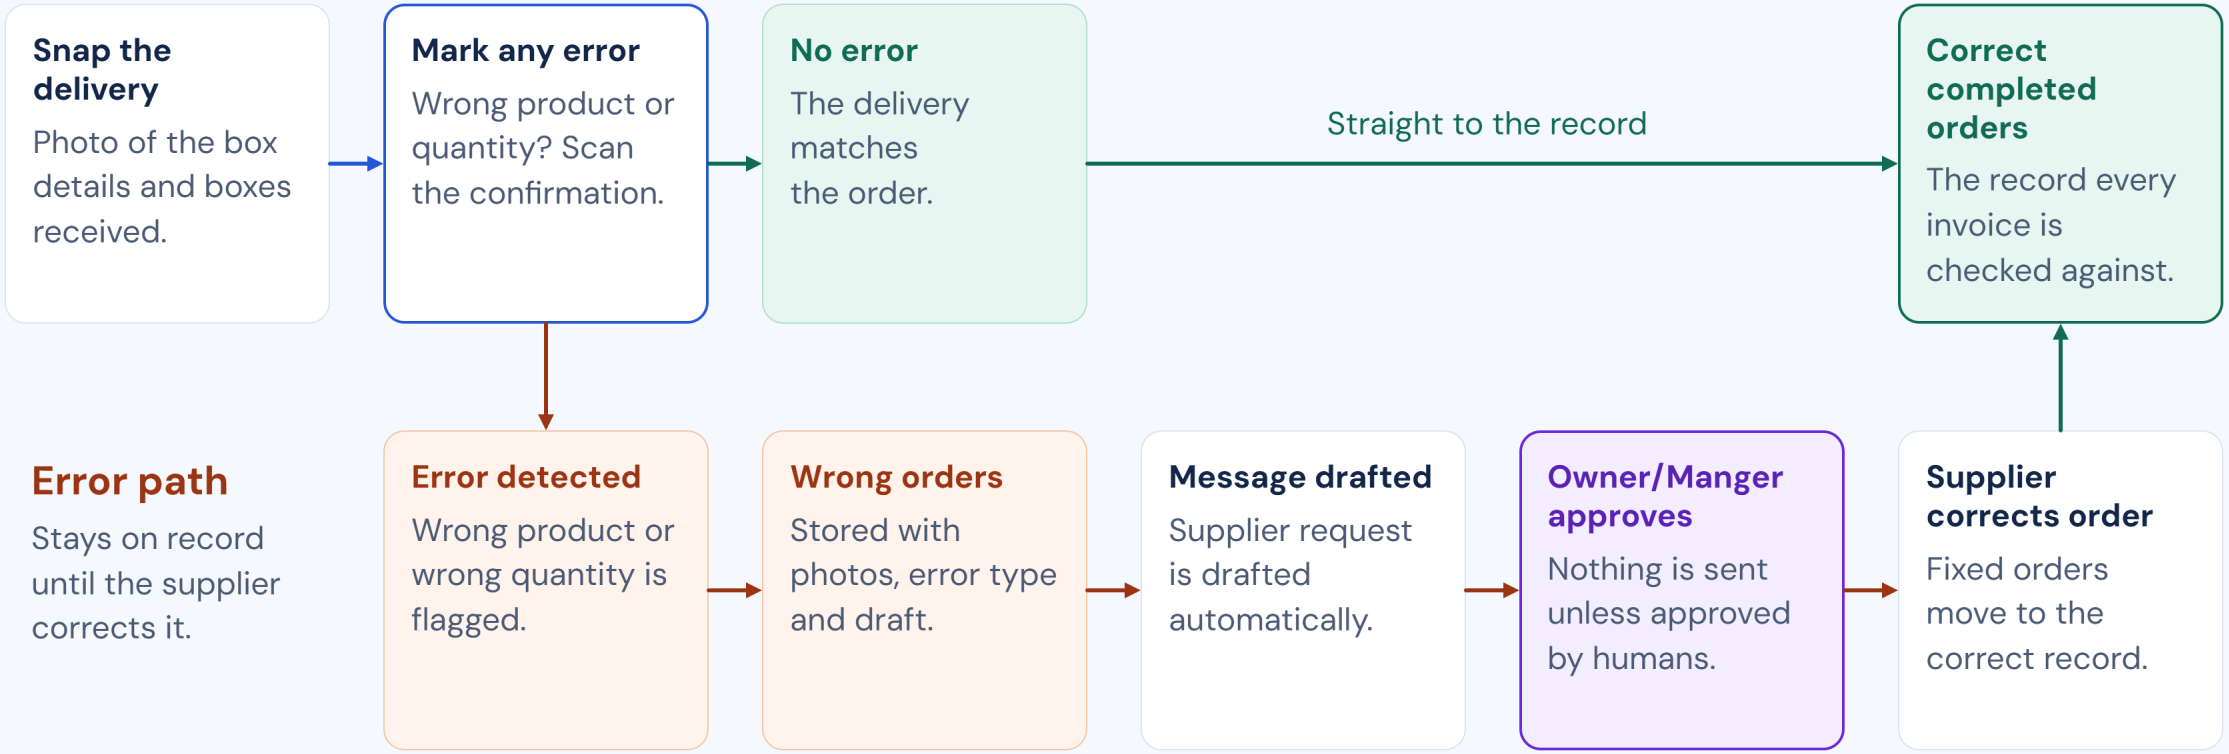

of extra selling, just to win back **RM500** overbilled on RM100,000 of stock.

7 in 10 Malaysian SMEs are micro businesses (69.7%). They have the least room to absorb a loss like this.

Sources: DOSM Economic Census 2023 (retail gross margin); SME Corp MSME profile, DOSM 2023 (micro share). 0.5% is an illustration from US foodservice invoice audits (2015); Malaysian rate not yet measured. · Tepat Bill · 4 / 12

SOLUTION 1 · AT EVERY DELIVERY

Record every delivery, flag errors at once

SOLUTION 2 · AT INVOICE TIME

Check the invoice before the shop pays

Three inputs

Supplier invoice, read by AI

Received orders

Agreed prices

Automatic check

Rules compare items, quantities and agreed prices. AI only reads the document.

Differences flagged

Each mismatch is shown in RM and raised to the owner.

Owner / Manager approves

Approves or dismisses each flag. Messages go out only after approval.

E-invoice for foreign suppliers

Foreign supplier? Tepat Bill detects it and prepares the self-billed e-invoice that Malaysian e-invoicing rules require. The owner approves it first.

Corrected payment by credit

Billed an extra RM100? The supplier issues a credit note for the difference.

Not paid yet: the credit note is set against the invoice, so the shop pays only the balance.

Already paid: the credit stays on the supplier account and is deducted from the next invoice.

LESS CHASING

Chasing a RM100 shortage by hand means finding the bon, typing the message and following up. We cut it to one tap.

FIT WITH ORBYTE AND OTHER SMES

The link between supplier and shop

Supplier
Delivers goods and sends the invoice.

→

Tepat Bill
Records deliveries, checks invoices, drafts corrections.

→

Shop owner / Manager
Reviews flags and approves every action.

WHY IT FITS

Built for Orbyte
Reuses Orbyte's roles, approvals, audit trail and credit wallet. Approved results go on to accounting partners.

Reusable across SMEs
Any shop that receives supplier deliveries can use the same flow for clearer supply of goods.

Pay per use
Proposed model: pay per check, in the same credit-wallet style as Orbyte.

HUMANS STAY IN CONTROL

Automation works, Humans decide

Automated

- Reads delivery photos and invoices
- Compares them with the records
- Flags differences in RM
- Drafts supplier messages

Needs owner / Manager approval

- Sending any message to a supplier
- Accepting or dismissing a flag
- Moving an order to correct
- Releasing the self-billed e-invoice

Roles and a record: staff can record deliveries, only the owner / Manager can approve, and every action is saved in an activity log.

SDG FIT

Supports SDG 8 and SDG 9

SDG 8

Decent Work and Economic Growth

8.2 Productivity through technology

Technology takes over the repetitive checking of deliveries and invoices.

8.3 Growth of small businesses

Small shops stop paying for goods they never received, protecting their growth.

SDG 9

Industry, Innovation and Infrastructure

Digital tools for small shops

Paper bons and WhatsApp orders become structured digital records.

Shared, reusable platform

Built to plug into Orbyte, so many SMEs can use the same flow.

BUSINESS BENEFIT

More than saved money

Cost

Overbilled and wrong orders are caught before they turn into losses.

Manpower

Less staff effort spent checking every delivery and invoice by hand.

Time

The owner / Manager reviews a short list of flags instead of checking every line.

Healthier cash flow

Overcharged money is also a lost opportunity. Kept in the business, it can be used elsewhere.

BUSINESS BENEFIT

No error goes unnoticed

Fewer human errors

The same check runs on every delivery and every invoice, instead of relying on memory.

Errors on record

Each wrong order is logged with photos, a message and a status until the supplier corrects it.

No wrong payments

Differences are flagged before payment, so mistakes do not end up harming the shop.

Check every delivery. Check every bill. Automation works. Humans decide
